visible vents, keep them dust free with an occasional blast from a can of compressed air.

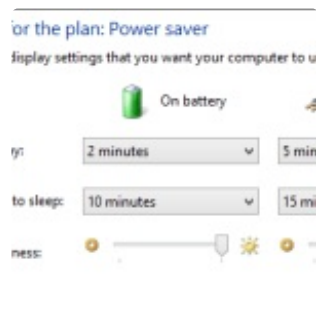

5. Don't double dip. Even the most basic of your laptop's processes tax the battery, so adding your smartphone or tablet to the mix saps the battery power even faster. Unless it's absolutely necessary, don't charge other devices or use external hard drives and USB plug-ins during battery-only time, and wait to upload those photos or listen to music.
